

Team Observation Measure, version 2 (TOM 2.0) (WERT)

The Team Observation Measure, version 2 (TOM 2.0) is designed to assess adherence to indicators of high-quality Wraparound observed during team meeting sessions. It consists of 36 indicators, organized into seven subscales - five dedicated to the key implementation elements of Wraparound (as trained by the National Wraparound Implementation Center and assessed by the WFI-EZ), one that evaluates meeting attendance, and one that assesses facilitation skills.

TOM 2.0 licensees also receive access to and use of WrapStat (the next generation version of WrapTrack), an online data entry and reporting system. The TOM 2.0 is an instrument of the Wraparound Fidelity Assessment System (WFAS), a multi-method approach to assessing the quality of individualized care coordination for youth with complex needs and their families. The WFAS was developed by the Wraparound Evaluation and Research Team (WERT) within the UW School of Medicine, Department of Psychiatry and Behavioral Sciences.
