

Wraparound Fidelity Index – Short Form, Version EZ (WFI-EZ) (WERT)

The Wraparound Fidelity Index - Short Form, (WFI-EZ) is a self-report survey of care coordinators/facilitators, caregivers or parents, youth, and Wraparound team members aimed at assessing adherence to the principles and practices of high-quality Wraparound care coordination. Data collected from these respondents' surveys result in quantitative summaries of wraparound fidelity for the program or community.

In addition to data gathering forms (online and paper versions), the WFI-EZ also includes training materials, user manuals, and access to the next generation data entry and reporting system, WrapStat. WFI-EZ is one component of the Wraparound Fidelity Assessment System (WFAS), a multi-method approach to assessing the quality of individualized care coordination for children and youth with complex needs and their families developed by UW WERT, UW School of Medicine Department of Psychiatry and Behavioral Sciences.
